

## Experimental Lake Erie Harmful Algal Bloom Bulletin

2010-015

13 September 2010

National Ocean Service

Great Lakes Environmental Research Laboratory

Last bulletin: 02 September 2010

Figure 1. MERIS image from the European Space Agency. Imagery shows the spectral shape at 681 nm from September 12, where colored pixels indicate the likelihood of the last known position of the *Microcystis* spp. bloom (with red being the highest concentration). *Microcystis* spp. abundance data from shown as white squares (very high), circles (high), diamonds (medium), triangles (low), + (very low) and X (not present).

Figure 2. Nowcast position of *Microcystis* spp. bloom for September 13 using GLCFS modeled currents to move the bloom from the September 12 image.

Figure 3. Forecast position of *Microcystis* spp. for September 16 using GLCFS modeled currents to move the bloom from September 12 image.

Please note:

- MERIS imagery was distributed by the NOAA CoastWatch Program and provided by the European Space Agency
- [http://www.glerl.noaa.gov/res/Centers/HABS/lake\\_erie\\_hab/lake\\_erie\\_hab.html](http://www.glerl.noaa.gov/res/Centers/HABS/lake_erie_hab/lake_erie_hab.html)
- Cell counts were collected by the Great Lakes Environmental Research Laboratory
- The wind data is available through the National Data Buoy Center and the National Weather Service
- Modeled currents were provided through the Great Lakes Coastal Forecasting System
