

Experimental Lake Erie Harmful Algal Bloom Bulletin

2011-002

16 June 2011

National Ocean Service

Great Lakes Environmental Research Laboratory

Last bulletin: 09 June 2011

Figure 1. MERIS image from the European Space Agency. Imagery shows the spectral shape at 681 nm from June 07, where colored pixels indicate the likelihood of the last known position of the *Microcystis* spp. bloom (with red being the highest concentration). *Microcystis* spp. abundance data from shown as white squares (very high), circles (high), diamonds (medium), triangles (low) , + (very low) and X (not present).

Figure 2. Nowcast position of *Microcystis* spp. bloom for June 16 using GLCFS modeled currents to move the bloom from the June 07 image.

Figure 3. Forecast position of *Microcystis* spp. for June 19 using GLCFS modeled currents to move the bloom from June 07 image.

Please note:

- MERIS imagery was distributed by the NOAA CoastWatch Program and provided by the European Space Agency
- http://www.glerl.noaa.gov/res/Centers/HABS/lake_erie_hab/lake_erie_hab.html
- Cell counts were collected by the Great Lakes Environmental Research Laboratory
- The wind data is available through the National Data Buoy Center and the National Weather Service
- Modeled currents were provided through the Great Lakes Coastal Forecasting System
